MEMORANDUM FOR: Chief, Defensive Systems Division, OSI

25X1A ATTENTION:

~~RECEIVED~~

CHIEF, REQUIREMENTS BRANCH, RECONNAISSANCE GROUP, CCS

FROM:

CHIEF, COMSEC (NEIC)

SUBJECT:

A Search for Possible AMM Installations Along the
Eastern Kamchatka Coastline Between Peschanyj and
Anapka

REFERENCES:

- (a) Requirement C-SI-3-80,791
- (b) CIA/PID Project C 1635-63
- (c) M/EB 156/64 dated 26 March 1964

1. This memorandum is in response to your requirement dated 12 November 1963 requesting a search along the eastern coast of Kamchatka between Peschanyj (57-54N 162-05E) and Anapka (59-59N 163-40E) noting track activity, approximate size of buildings and approximate date of construction of building groups.

2. Per our discussion, no measurements were made on installations not believed to be related to AMM activity. The villages along the coast line appear to be mainly associated with the economics of the area, fishing, hunting and ship repair. No installations comparable to the terminal range instrumentation stations were observed, but a possible communication station (Area A) was observed at 58-34-20N 162-19-30E, one nautical mile northeast of the fishing village of Ivashka. (See M/EB 156/64 dated 26 March 1964.)

25X1D This site consists of two lattice-type towers approximately 65 feet high and four buildings symmetrically arranged. The towers are 650 feet apart.
25X1D This area (A) has been constructed between Mission [] and Mission []. A probable support area (Area B) is located approximately one-half mile southwest of the site and contains 20 buildings. The largest being approximately 200 feet in length. Another group of buildings of undetermined function consists of a secured area containing one building approximately 130 feet long and three other buildings outside the secured area (Area C). Both
25X1D Area B and Area C appear unchanged since Mission [].

Little track activity was observed in the search, and that which was followed revealed no AMM activity.
